

Einfluss der Episodenlänge T auf die Hyperparameter-Wahl

GPU: A5000 (24 564 MiB) | batch_size=4 | 500 Episoden

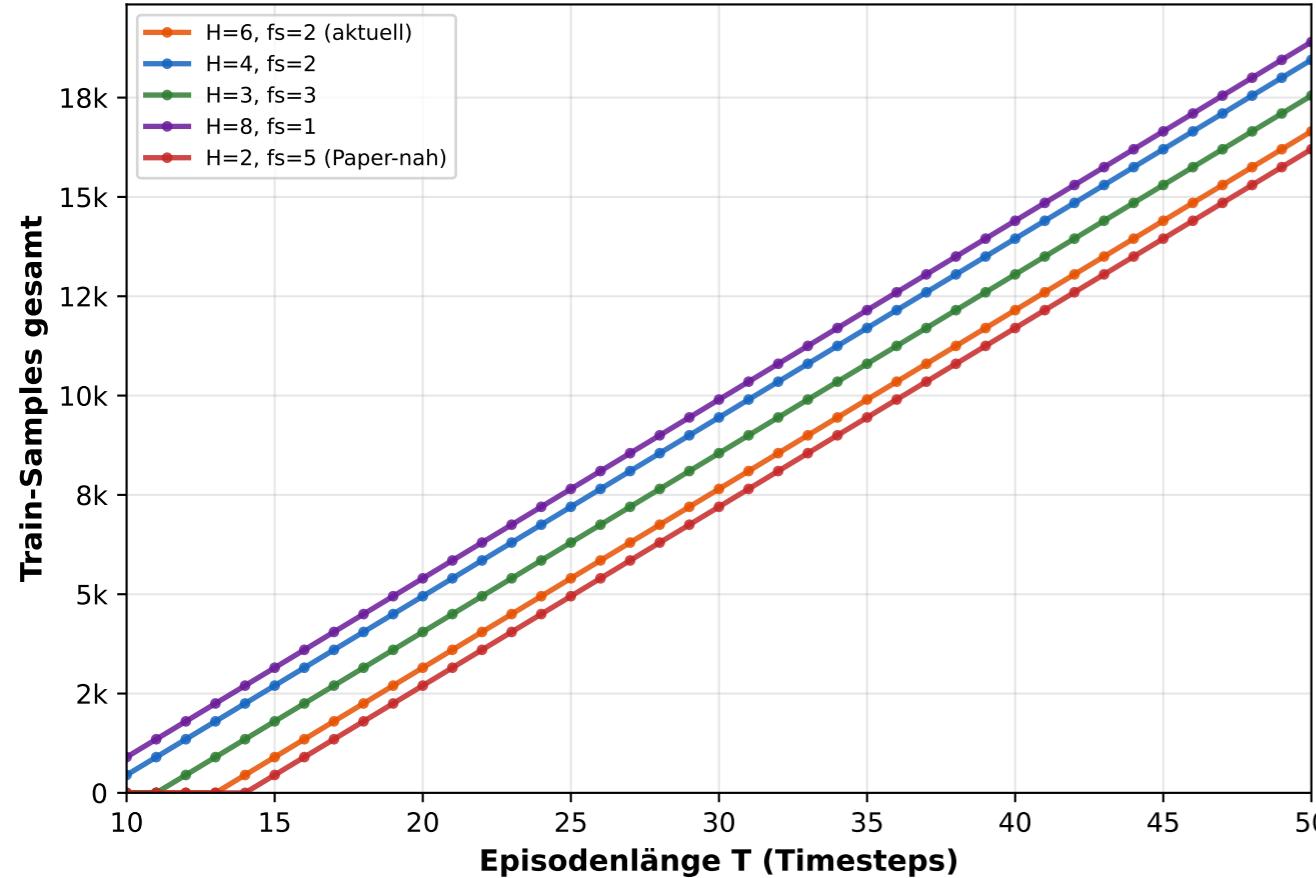

**Maximales num_hist pro Episodenlänge
(Rollout + VRAM Limit, bs=4)**

**Training-Slices pro Episode über T
(mehr Slices = mehr Daten pro Episode)**

**Gesamte Train-Samples über T
(500 Episoden, split_ratio=0.9)**

**Max. num_hist (Val-sicher)
T x frameskip → H (bs=4)**
